

**Request for Research Activities and Prices for Breast Procedures**  
Dr. Appleton will review the information below. PI should complete and sign below.

|  |             |
|--|-------------|
| PI name/contact #:   |             |
| HRPO #:  | Study name: |
| Research coordinator name and contact info:                                    |             |
| Purpose of the study:  |             |
|  |             |
| Number of subjects expected at this institution:                               |             |
| Eligibility criteria:  |             |
|  |             |
| Exclusion criteria:  |             |
|  |             |
| Number of procedures per subject:  |             |
| Type of tissue (core or FNA) and number of cores or passes for each procedure: |             |
| Will a clip be placed at the time of the procedure?                            |             |
| Will tumor measurements be needed?   |             |

For biopsy request: The Breast Imaging staff, Chera Dunn or Stephanie White will schedule the biopsy. When scheduling, you must be prepared to indicate which breast will be biopsied, the name of the referring physician requesting the research biopsy, and the above information if asked. You must indicate this is for a research study so that coding can be applied in Soarian to prevent billing to patient's insurance. Call 454-7430 to arrange.

The patient must be consented by a research coordinator and arrive in the department with the signed consent. The PI's research coordinator must be present to collect any specimens, and bring a specimen container (unless the specimen goes into a standard formalin solution).

PI Signature: \_\_\_\_\_ Date: \_\_\_\_\_

**Note:** Quotes are based on CPT codes provided and reflect the routine time and activities required when that clinical code is used. Please realize higher fees may apply if either the technical or professional research activities exceed those performed using that clinical CPT code.

As an academic center, we do our best to support research activities such as your request. We are committed to allowing access to the advanced imaging resources and support for a large number of clinical investigators. As such, we provide the latest in advanced imaging technologies, equipment and expertise to support basic and translational inpatient and outpatient clinical research. Your request will be carefully considered.
